ECONNECTION

**three different companies,
one common goal:**
let's make the future
biodegradable

The **BIO-BOX** was born with the aim of collaborating towards a shared goal:

Penn Textile Solutions, Tessitura Colombo Antonio and Elastici Besana joined forces to expand the frontiers of sustainable manufacture practices.

Three expertises aligned on one common strategy: elastic knitted fabrics, laces and elastic bands realized using yarns that are certified as either biodegradable or degradable. The objective is to provide all the elements necessary to design a complete item of clothing that is able to decompose and ultimately reduce pollution caused by excessive waste.

Amni Soul Eco® is a polyamide yarn with the property of enhanced biodegradability.

This yarn is tested to biodegrade in a 5-years time frame when disposed of in specific landfills.

Oeko-Tex® certified material.

Roica™ V550 is a degradable elastane yarn that breakdowns at a higher rate in a microbiologically active soil.

Cradle to Cradle Gold Level Certified™.

Penn Italia

Via Resegone N. 1 - 22070 Bregnano (Como)
